

Carbon Monoxide

Get a carbon Monoxide alarm to protect you and your loved ones

Carbon Monoxide (CO) is a poisonous, flammable gas that is colourless, odourless and tasteless

It can cause symptoms such as headaches, confusion, shortness of breath, serious illness and death

Carbon Monoxide does not have to be in your home for you to be affected, it can travel through walls

Carbon Monoxide can come from common household appliances used for heating and cooking can produce carbon monoxide if they are not installed properly, are faulty or are poorly maintained

If you think you have carbon monoxide poisoning Call 111 for advice OR call 999 if you are finding it difficult to breathe, you suddenly become confused or someone loses consciousness

Install a Carbon Monoxide Alarm Preventative measures put in place can help reduce the risk.
